Communication skills

I have pretty good communication skills thanks to my job at Centro.hr where i had to interact with customers on a daily basis.

Job-related skills

I have a good knowledge of HTML, CSS and JavaScript, and I try to acquire more knowledge every day, either by reading tutorials or practising by building websites myself. I've done a few PHP projects as well, i consider myself a beginner in PHP, but willing to learn more about it, since i like it a lot.

I had a course on C++ in college, and can say i have a strong understanding of fundamentals in programming. I'm currently learning Object-Oriented Programming in PHP in college as well as Client Scripting which is JavaScript advanced.

I had 2 courses on MySQL and can say I have a wide knowledge about relational databases and have a lot of experience with MySQL.

I've spent a lot of time on learning Search Engine Optimization, and i know pretty much about it, and enjoy learning about it. The field in SEO that i'm best at is YouTube, i have several videos that are #1 in search results for certain keywords. I also know how to do on-page SEO when building websites.

I also have some experience with administrating Windows, know how to use Hyper-V to create virtual machines and i know what active directory is.

I have some Linux experience too, CentOS precisely, but my knowledge in Linux is basic.
